SUMMARY

I build things that actually work and more importantly, things people genuinely want to use.

I'm a software engineer who thinks like a product person. Over the years, I've taken ideas from rough concepts to fully working web and mobile platforms. From frontend interfaces to backend systems, automation tools, and infrastructure, I enjoy building products from the ground up and making sure they hold up when real users start showing up.

One project I'm especially proud of is a mobile app builder that lets people create fully functional apps in just a few minutes. You type a few prompts, and the platform generates a real working mobile app complete with deployment to app stores in just a click. I love solving problems like that: taking something complicated and making it feel simple.

But I don't just write code. I enjoy the messy middle between product thinking, system design, and performance. Give me a rough idea, and I'll help turn it into something real, scalable, and actually enjoyable to use.

WORK EXPERIENCE

Salistech Limited

Mar. 2022 – Apr. 2026

Full Stack Engineer

Remote

- Developed a platform capable of generating mobile applications using Expo templates, frontend scaffolding, backend integrations, and deployment workflows.
- Designed and implemented a next-generation digital payment processing platform, enabling customers to transfer funds using social media identifiers or mobile numbers, reducing dependency on traditional banking details while ensuring compliance with financial security standards.
- Improved engineering workflows through CI/CD pipelines, GitHub Actions, PM2 process management, and performance optimization.

eHealth Africa

Sep. 2024 – Dec. 2025

Full Stack Developer

Remote

- Developed a healthcare decision support tool using OpenEHR's GDL2, integrating clinical rules with structured patient data to assist medical professionals in real-time decision-making.
- Built and maintained secure healthcare dashboards with appointment scheduling, messaging, and role-based access control.

Upwork

Mar. 2020 – Aug. 2021

Website and mobile app Developer

Freelance

- Delivered full stack and mobile application solutions for international clients across multiple industries.
- Developed backend APIs, authentication systems, and frontend interfaces optimized for performance and usability.

Rivatrix Toys

May. 2020 – Apr. 2021

Frontend Developer

Australia

- Designed and completed an e-commerce platform focused on children's learning materials, educational games, and interactive tools. The platform provides a seamless shopping experience for parents and educators while incorporating personalized learning recommendations and engaging product displays.
- Fixed bugs from existing website and implemented enhancements that significantly improved web functionality and speed.

EDUCATION

Federal University of Technology

Bachelor of Technology - BTech

SKILLS

- Next js / Nest Js
- React / React Native
- Mobile Application Development (Android & IOS)
- JavaScript

- Node.js / Express Js
- MongoDB / Postgresql
- Python / Java
- Django REST Framework
- Software Documentation
- Prisma ORM
- AWS cloud Services / Kubernetes / Docker
- Wordpress / Drupal / PHP / CMS

PROJECTS

AI Mobile App Builder

2026

Developed a no-code AI platform that generates mobile apps from natural language prompts.

Built frontend and backend systems for dynamic app generation, authentication, and real-time previews

Integrated AI APIs and scalable cloud infrastructure to automate app creation workflows.

Stack: Fastlane, Express, MongoDB, Postgresql, Anthropic, Next.js, OpenAI, Tailwind CSS, React Native, Redis, BullMQ

Multi-Tenant Hotel Management System

2025

Web platform for room booking, payment processing, and transaction history visualization. Implemented booking logic, user dashboards, and operational workflows for hotel staff and guests.

Stack: Python, Django, AWS, Next Js

Workergen

2025

AI-powered platform where businesses, professionals, and individuals hire AI agents to automate tasks, boost productivity, enhance creativity, and optimize operations. From AI-driven sales and marketing automation to intelligent chatbots, content creation, and workflow optimization, Workergen empowers users to work smarter, not harder.

Stack: Next Js, Express, Redis, BullMQ, Open Ai
